

THE AD HOC GROUP FOR MEDICAL RESEARCH

The Ad Hoc Group Fiscal Year 2022 Recommendation

The 366 undersigned members of the Ad Hoc Group for Medical Research, which represents patient groups, scientific societies, research and academic institutions, health professionals, educators, and industry, are grateful to Congress for making meaningful, reliable annual funding support for the National Institutes of Health (NIH) a key national priority. NIH-funded biomedical, behavioral, social, and population-based research not only has improved our understanding of fundamental life and health sciences but also has prepared us to combat unprecedented health threats, including the COVID-19 pandemic, and promoted development of ever-evolving medical advances. We are immensely grateful to the leaders of the Senate and House Labor-HHS Appropriations Subcommittees over the last six years, who have worked together in driving Congress to provide strong bipartisan investments in the agency after over a decade of effectively flat budgets.

For fiscal year (FY) 2022, the Ad Hoc Group recommends a program level of at least \$46.111 billion, a \$3.177 billion increase over the comparable FY 2021 funding level for the NIH, which would allow for the NIH's base budget to keep pace with the biomedical research and development price index (BRDPI) and allow meaningful growth of 5%.

Over the years, distinguished leaders and experts in medical research have recommended a sustained funding approach that allows real growth through increases that exceed inflation by 4-6%.^{1,2} For example, Congress has heard testimony in the past from NIH Director Francis Collins, MD, PhD, about how “a stable trajectory of inflation plus 5% for multiple years in a row”³ would optimally support the medical research enterprise in advancing discovery and improving health. This proposed funding level also is consistent with the recent report from the American Academy of Arts and Sciences recommending a sustained real growth rate of *at least* 4% for basic research across the federal government, with commensurate growth in applied research investment trajectories, in order to maintain U.S. research and development leadership internationally.⁴ As the world's premier public funder of medical research, the NIH is an important factor in that international leadership. Strong growth above BRDPI for the NIH provides critical support for additional research across the agency's diverse areas of study, conducted nationwide and through the NIH's 27 individual Institutes and Centers.

To achieve this important priority, it will be essential to maximize the nation's commitment to discretionary spending programs and ensure a funding allocation for the Labor-HHS Subcommittee that allows for the necessary investment in NIH and other

⁴ Augustine, N., & Lane, N., et al. (2020). (rep.). *The Perils of Complacency America at a Tipping Point in Science & Engineering* (pp. 1–55). Cambridge, MA: American Academy of Arts and Sciences. <https://www.amacad.org/publication/perils-of-complacency>

agencies that promote the health of our nation. The extraordinarily tight budget caps Congress faced in FY 2021 led to the smallest investment in base growth at the agency in six years. The global COVID-19 pandemic has illustrated the value of the nation's longstanding commitment to NIH, the need to remain vigilant in providing robust support for fundamental research as we do not know when or from where the next threat will come, and the consequences of underinvestment in key public health priorities. We urge Congress to avoid underinvestments that would put the pace of medical research, the career trajectories of students and early-career investigators, and hope for patients and their families at risk. To fully harness novel research tools and partnerships against existing threats and in preparation for the next pandemic, we instead must continue the forward momentum of above-inflation investments in the NIH.

In addition to strong growth in the NIH's base budget, emergency supplemental funding continues to be necessary to support COVID-19-related expenses associated with both pandemic- and non-pandemic research and the research workforce pipeline. NIH-funded research has been critical to combatting the COVID-19 pandemic through the development of diagnostics, treatments, and vaccines. The incredible pace of scientific advancements, particularly the rapid development of the SARS-CoV-2 mRNA vaccines that have received emergency use authorization from the Food and Drug Administration to date, has been possible because of decades of NIH-funded basic research in a variety of areas,^{5,6,7} supplemented by emergency funding over the last year. Many NIH-funded projects across a wide range of patient priorities, however, were disrupted as a result of the public health emergency, and additional resources are needed to allow pre-pandemic research to recover and to support the next generation of scientists. Therefore, we also urge expeditious approval of emergency funding for NIH to mitigate the impact of the public health emergency on our nation's research enterprise.

In sum, the NIH plays an instrumental role in funding basic, translational, and clinical research nationwide, and facilitating the translation of this knowledge into better health for patients. The agency has proven its value, yet again, during the pandemic, and has demonstrated an indisputable, outsized return on the nation's past long-term research investments. In addition to promoting the population's health, medical research supported by NIH serves as a major economic engine for the nation, with its multiplicative effect in local economies by generating over 475,000 jobs and \$81 billion in new economic activity in FY 2019.⁸

We must ensure robust funding for NIH in FY 2022 to continue making scientific advances and providing hope for millions of people. Continuing this longstanding bipartisan commitment will be key both in battling against infectious diseases like the novel coronavirus, which can damage lives and our economy in the future, and also against all of the other diseases, conditions, and maladies that afflict the people of our country, where the NIH has been at the forefront in driving progress.
