

setting your SIGHTS

Can You See Your Future? Discover your passion for a career in research.

Eyes are the window to the world. They are one of the most crucial organs with various roles to perform in the body. Vision loss significantly impacts an individual's quality of life. That's why eye and vision researchers have essential duties. And just like the eyes, they have many rewarding jobs. What do vision researchers do and how do you get started?

ARVO's *Setting Your Sights* (SYS) program aims to support individuals that are interested in pursuing a career as an eye and vision scientist. The program is free, flexible, and right at the edge of your fingertips!

ARVO has developed a resource hub filled with information and opportunities to get you started, such as:

- Connecting students with visual science mentors.
- Setting up schools and communities with SYS Advocates, speakers from any career level, share their journeys and next steps.
- Providing a list of STEM and vision science internships, online learning materials, research engagements, contests, and more.

WHAT ARE YOU WAITING FOR?

Scan the QR code below and start learning about what it takes to become an eye and vision scientist.
